REMOTE COLLABORATION  
**MADE EASY WITH XR**

# WHY CORTEX<sup>2</sup>

Existing services aimed at facilitating remote team collaboration are not yet ready to efficiently and effectively support all types of activities, and XR-based tools, which can enhance remote collaboration and communication, present significant challenges for most businesses.

**At CORTEX<sup>2</sup>, we will bridge the divide between widespread video-conferencing tools and XR-based solutions, democratising the uptake of next-generation XR tele-cooperation.**

## THE CORTEX<sup>2</sup> XR PLATFORM

To this end, we are developing an innovative digital XR platform that will facilitate work and social activities involving physical interaction with the environment and remote objects — from industrial cooperation to technical training and business meetings.

## THE CORTEX<sup>2</sup> OPEN CALLS

We are now looking for partners to provide new modules to improve its functionalities, adaptability and replicability in new domains and use cases.

# LET'S CREATE THE NEXT GENERATION OF XR TECHNOLOGIES!

We will invest €4 million in 2 open calls to recruit and support European companies (tech startups/SMEs) and research institutions (universities, NGOs, foundations, associations) to co-develop our CORTEX<sup>2</sup> platform and replicate it in different domains.
